Version 1

Angel Lopez, Adrian Alfred MacArayan, Logan Bowles

## 1. Project Overview

Our Tutelage web application aims to connect users to the tutoring services offered on the webpage. Certified tutors on the application can create class listings for a wide range of subjects, assign a class meeting time, and recommend material they see as needed for the success of their students. Users are presented with recommendations based on subject preferences or popular classes. They are also provided a search feature to help narrow down the options. They can participate in public or private 1-on-1 classes for a fee. Users can leave a review of the class. Admins are responsible for moderating the accounts of users and tutors, seeing general usage information, looking at transaction records, and more.

## 2. Use-Case Model
